It's in our nature

# Enter the world of DFI

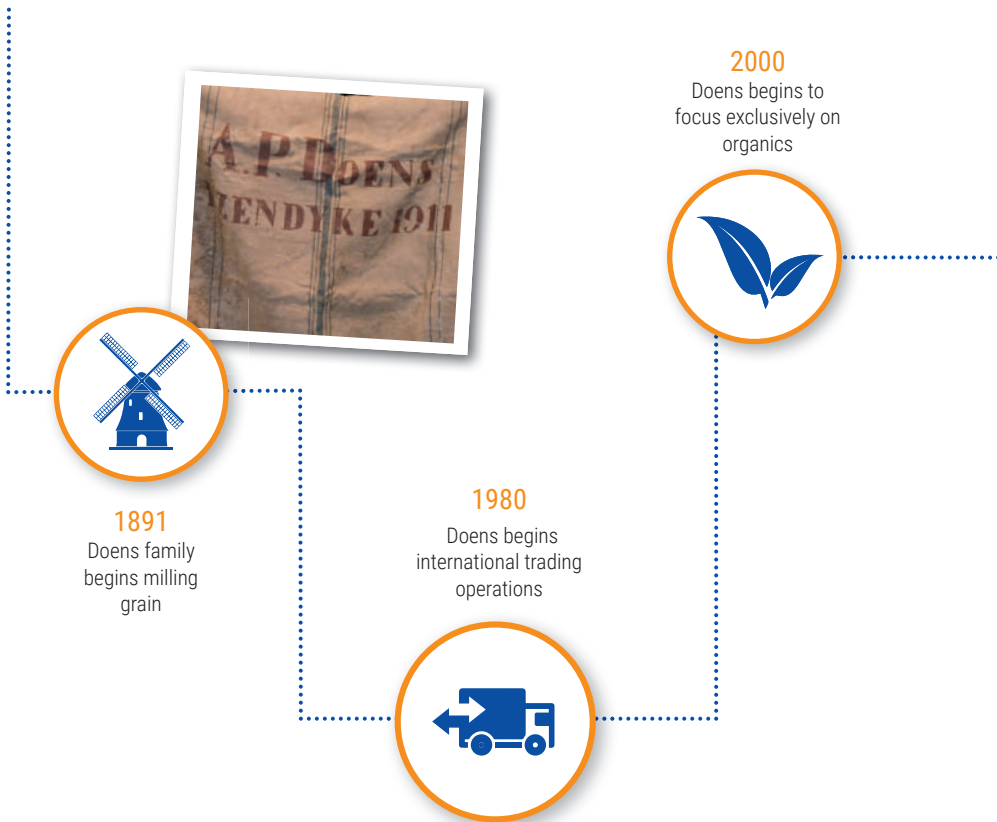

## It's in our nature.

The US subsidiary of Doens Food, a fourth-generation, family-owned company headquartered in the Netherlands, DFI Organics is the premier partner for high-quality, responsibly sourced products that meet your certification and specification needs. But we're more than just our food and feed ingredients.

As pioneers in the organic and natural food space, we've lived the challenges—and seized the opportunities. We're curious by nature, always looking for the next puzzle to solve. We take our responsibility to our stakeholders seriously. Whether they are customers, suppliers, or colleagues, they rely on us every day to fulfill our promises. We're passionate about creating sustainable outcomes that give current and future generations access to healthy and responsibly grown food. And our unique stubbornness and good humor drive everything we do.

Wherever your needs lie, we invite you to enter the world of DFI Organics. We think you'll like what you find. After all, it's in our nature.

of DFI Organics!**

# Cambodia

Located entirely in the tropics and dominated by seasonal monsoons, Cambodia is ideally positioned as a supplier of high-quality rice. Made up of smallholder farmer collectives and capable of producing two crops per year, rice grown in Cambodia consistently receives international acclaim. The most popular varieties grown are white gold and jasmine.

## DFI'S WORK IN CAMBODIA

Our project in Cambodia is a commitment to a sustainable source of organic products. We support 4,500 farmers, bringing their products from their farms to the world. We support local initiatives focused on gender equality, clean energy implementation, and climate impact.

## OUR PRODUCTS

Long grain rice and jasmine rice are the primary products grown by our partners. Our rice is available in its raw form or can be parboiled or processed into derivatives such as flour or bran. We also source palm sugar and select varieties of spices, focusing on the unique flavor and authenticity of this region.

# Uganda

Uganda's moderate tropical climate makes it one of the most fertile countries in Africa. Temperatures rarely venture more than a few degrees above or below 70 degrees Fahrenheit. Rainfall is plentiful, with a short dry season in December and January. With all of these attributes, there is no wonder as to why Uganda's certified organic land is growing rapidly.

## DFI'S WORK IN UGANDA

DFI honors the strong tradition of cooperative farming in Uganda. We work with 35,000 smallholder farms, proudly promoting improved economic and social outcomes for nearly 350,000 people. Our farm partners have a guaranteed market where they can sell all their cash crops and receive training and assistance from dedicated field officers. Our local factory provides additional employment opportunities at fair wages and good working conditions.

## OUR PRODUCTS

Sesame, chia, and bird's eye chilis are our main products. Birds' eye chilis from Africa are noted for their heat and are commonly processed into pepper extract. Chia, traditionally grown in Latin America, is a promising new crop that grows well in Uganda's fertile soil. Our organic sesame is ideal for paste, bakery, and crushing applications, with higher-than-average oil and protein values. We offer cleaning and sterilization locally with our FSSC 22000 certified production facility.

# Grains

From traditional row crops like corn and soy, to ancient and specialty grains like quinoa and teff, DFI Organics handles a wide variety of grain products. Whether you need bulk or packaged, feed grade or food grade, raw or processed, gluten free, or even allergen free, DFI has the expertise and relationships to deliver what you are looking for.

*Organic grains*

# Seeds

Our broad range of seeds are perfect for your bakery, snack food, cereal, or oil crushing needs. While we specialize in sesame, sunflower, flax, and pumpkin, we can provide the perfect product for your application from our own projects or through our extensive global network. All of our seeds can be cleaned and processed in facilities that are audited under GFSI approved schematics.

# Pulses

The continued growth of the plant-based food movement has seen demand for pulses rise exponentially. We focus on supplying high-quality, nutritionally dense products to the canning, bagging, and processing industries. We also offer select products further processed into flours, which are ideal for the gluten free baking and pasta industries.

*Variety of  
organic pulses*

# Rice

**Cambodian rice fields**

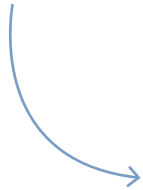

We grow and source organic rice for a multitude of applications in the food industry. Our project in Cambodia supplies organic brown, organic long grain white, and organic jasmine rice directly. We source basmati from the finest growing regions in Pakistan. Our rice is available raw or parboiled. Additionally, we can offer rice derivatives like flour, syrup, and protein.

# Herbs & Spices

We offer a wide variety of herbs and spices. Our projects in Cambodia and Uganda provide bird's eye chilis, vanilla, and pepper. Our extensive global partnerships reach some of the best spice growing regions of the world, including Southeast Asia, Turkey, and parts of Africa. Our supply chain provides global flavors, sourced in an ethical and traceable way.

*Growing bird's eye chili*

# Oils & Fats

With our presence in the oilseed market, it's only natural that our product portfolio would include crude and refined oils. Our main oil portfolio contains soy, sesame, safflower, sun, flax, and canola. Additionally, we source and supply various alternate oils, such as coconut and avocado. Our products are used as cooking oils and key ingredients in salad dressings, margarines, confectionary products, and cosmetics.

# Feed Ingredients

Feed ingredients are often the natural byproduct of the food manufacturing process. Many of the products we offer enter our supply chain as the result of our food ingredient processing. Our main products are oilseed meals, including soy, sesame, flax, and canola. Additionally, we work with feed grade grains such as corn and wheat. We are a comprehensive solution for your animal nutrition needs.

# Quality assured

**Food safety, product integrity, and customer satisfaction are the focuses of our quality assurance program. Our rigorous testing program, coupled with full traceability of our products from farm to consumer, ensures that our ingredients comply with all regulatory and customer requirements.**

“Quality Assurance” isn’t just the name of a department at DFI Organics. It’s a fundamental philosophy, driven by our core values. Our comprehensive risk management system is designed to monitor and document every transaction for compliance with our standards, our customer’s standards, and regulatory standards.

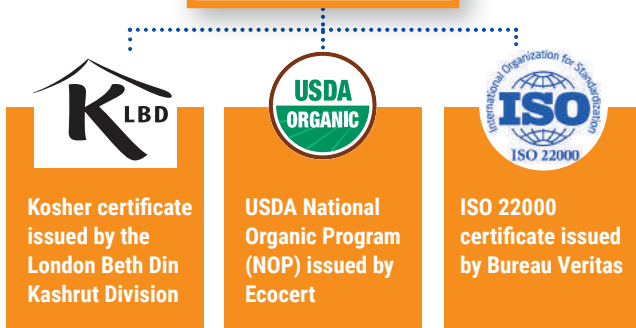

Our monitoring and testing program starts with assessments of all suppliers, evaluating their business practices, farming practices, and processing capabilities. We scorecard the countries we source from based on numerous factors, including known corruption and risk of cross contamination from conventional farming. We test and approve all our products before shipment, using qualified, accredited laboratories and surveyors. During storage, product is constantly monitored to make sure it remains within specifications.

Our fully traceable, “farm to fork” supply chain makes us the ideal partner to give you confidence in the integrity of your products.
